Subject: Biden-Harris Administration's Rejection of NASAS Enabled July 13, 2024 Assassination Attempt on President Trump – Urgent National Security Recommendation

Executive Overview

Mr. President,

I am writing to bring to your immediate attention a critical national security failure under the Biden-Harris Administration that directly contributed to the near-fatal assassination attempt on your life by Thomas Matthew Crooks on July 13, 2024, at the Butler, Pennsylvania rally. This incident, which claimed the life of patriot Corey Comperatore and injured two others, could have been prevented by the National Active Shooter Alert System (NASAS) – a real-time, GPS-precise alert technology I developed in direct response to congressional mandates.

Despite bipartisan support for active shooter prevention measures and my repeated outreach to White House officials, the Administration dismissed NASAS, prioritizing politics over lives. This rejection not only endangered you but continues to leave

Americans vulnerable to mass violence. Implementing NASAS now could thwart future threats, including against your Administration, and fulfill the bipartisan intent of the Active Shooter Alert Act (H.R. 6538). I urge swift federal adoption to save lives and enhance security.

Background on NASAS Development

Following the devastating 2022 mass shootings at Buffalo Tops Supermarket (10 killed) and Uvalde's Robb Elementary School (21 killed), I consulted with the Uvalde County Coroner and developed NASAS as a compliant solution to H.R. 6538, the Active Shooter Alert Act of 2022. Passed by the House on July 13, 2022 (260-169 vote) and endorsed by groups like the National Fraternal Order of Police and National Sheriffs' Association, the Act mandates a national coordinator in the Department of Justice to establish an "Active Shooter Alert Communications Network" – an AMBER Alert-style system for rapid public notifications during active shooter events.

NASAS is a mobile app-based system enabling real-time, precise GPS alerts to users in affected areas. Key features include:

- **Instant Notifications:** Users receive geo-fenced texts or push alerts with shooter location, evacuation routes, and safety instructions.
- **User Reporting:** Allows civilians to send texts or photos to authorities, crowdsourcing intelligence to outpace threats.
- **Integration Ready:** Compatible with existing FEMA Wireless Emergency Alerts (WEAs) and law enforcement protocols, ensuring broad deployment without new infrastructure.

  A demo of NASAS is available in the attached app screenshot, showing simple "Send Text" and "Send Photo" interfaces for rapid response. This technology could have alerted rally attendees and law enforcement to Crooks' position on the AGR building rooftop 20 minutes before he fired, per Secret Service timelines.
  White House Rejection and Preventable Tragedies

In 2023, my partners and I met with key Biden-Harris officials to pitch NASAS:

- **Vanessa L. Chen,** Special Assistant for Gun Policy (Office of Public Engagement/WHO), who received a Thanksgiving 2023 email.
- **Attorney Harmeet K. Dhillon,** 2024 email noting the Administration's "lack of interest" in regrouping efforts post-rejection inquiring to sue.
- **Stefanie Feldman,** Director of the White House Office of Gun Violence Prevention.

Despite the Act's bipartisan passage and the Administration's public rhetoric on gun violence, both officials dismissed NASAS without substantive review. I anticipated enthusiasm given Democrats' post-shooting calls for action, but they "blew us off." This inaction had deadly consequences:

- **Lewiston, Maine (October 25, 2023):** Robert Card killed 18 and injured 13 at a bowling alley and bar. I informed Ms. Chen that NASAS could have saved at least 8 lives through early alerts to sheltered residents. No response.
- **Butler Rally (July 13, 2024):** Crooks, a 20-year-old lone actor, fired from an unsecured rooftop, grazing your ear and killing Corey Comperatore. NASAS could have enabled instant crowd-sourced reports of Crooks' suspicious activity (e.g., drone scouting hours earlier) and geo-targeted evacuations, preventing the attack. The FBI confirmed Crooks acted alone, underscoring the need for civilian-enabled real-time alerts.

Fearing further deaths, I contacted Harmeet Dhillon (Dhillon Law Group) in early 2024 to explore suing the Administration for non-compliance with H.R. 6538 and mandating NASAS rollout. Ms. Dhillon declined, citing challenges in enforcement. Tragically, months later, the Butler attempt proved the stakes.

Cover-Up and Broader Implications
This failure appears covered up:

- U.S. Secret Service and FBI investigations into Butler omitted NASAS despite its relevance to alert protocols.
- House GOP Oversight Committee probes have not addressed the Act's unimplemented network, allowing preventable risks to persist.
- The US Secret Service laughed at my report, and after many attempts the FBI won’t even sit down with me, GOP Oversight has not once responded to my emails or numerous phone calls.
- Mr. President, my report was withheld from then candidate Trump running cover for your political opponent's path to the Presidency, election interference on a massive scale, but all is not loss, the midterms.

NASAS is bipartisan – saving lives transcends politics. Had it been adopted, we might never know if figures like Charlie Kirk (hypothetical reference to potential targets) would be safe today. As a powerful deterrent, it could prevent mass violence and protect high-profile events like your rallies.
Recommendations and Call to Action

Mr. President, this is a national security imperative:

1. **Direct DOJ Implementation**: Appoint a NASAS coordinator under H.R. 6538 to integrate it into the national network, partnering with FEMA for WEA compatibility.
2. **Pilot Deployment**: Roll out NASAS for Trump Administration events, providing your detail with enhanced civilian intelligence.
3. **Oversight Review**: Task the AG with investigating the prior Administration's rejection and any cover-up.
4. **Public Availability**: Make NASAS free for all Americans via app stores, complying with the Act's goal of universal access.

I stand ready to brief you, VP Vance, or Mr. Jivani, Stephen Miller personally and provide full technical demos. Attached: NASAS app screenshot and supporting H.R. 6538 documentation. Please respond promptly – American lives depend on it.

Mr. President, my dealings regard to with October 7th & Biden's auto-pen to be investigated.

Mr. President, important to note: your life was saved & my life was revived literally thanks to Pennsylvania.

Trump Organization, family's of recent victims in the Federal Courts.and other options.

The recent Lewiston Maine mass shooting is a clear example we are certain eight people were killed at the second shooting location, the restaurant, 8 family's wouldn't be grieving today.
We are also very confident the 2 day costly manhunt, both lock-downs & law enforcement agencies, would not have been necessary.

Saving lives is Bipartisan, the lack of action continues to cost American's their lives so we are going to resort to alternative means to make our crime fighting / lifesaving technology public & available to all Americans which may or not include Republicans, the Trump Organization, family's of recent victims in the Federal Courts.and other options.

The recent Lewiston Maine mass shooting is a clear example we are certain eight people were killed at the second shooting location, the

Hi Pete, you can't sue the Biden administration for failing to buy or implement your product. I'm sorry.

Mr. President, I still have NASAS on my phone.

Shown here is a YouTube demo of an earlier version of NASAS, the gateway to our other technology to “Make America Safe Again” “Like never Before”

https://www.youtube.com/watch?v=eJy7Nt2qUvo

Best Regards,
Peter Marino
